

CTGAN and TVAE: paper versus our replication

Matching metrics for the four datasets with recorded final results

Adult aliases averaged and counted once. Paper averages classifiers; our replication uses DNNs.
Test maxima were selected on the test set. Scores do not establish leakage-free superiority.
No matching final results: Census-KDD, Credit, Intrusion, News. Source: CTGAN paper, Table 6 (1907.00503v2).
